I have an interest in backend development, artificial intelligence, and data engineering. I am highly enthusiastic and eager to learn new things in order to continuously improve myself.

Work Experiences

PT Neural Technologies Indonesia - South Jakarta <i>Intern Backend Engineer</i> PT Neural Technologies Indonesia (NTI) is a technology-driven company focused on delivering innovative, reliable, and scalable solutions to support business growth in an increasingly digital landscape. - Develop and deploy RESTful APIs for web applications. - Perform API testing, centralized documentation, refactoring, and bug fixing. - Validate SQL queries to meet feature requirements. - Communicate and collaborate with the team.	Jun 2025 - Oct 2025
Kementrian Pekerjaan Umum - South Jakarta <i>Web Developer</i> The Ministry of Public Works of the Republic of Indonesia is a government agency responsible for managing affairs in the field of public works to assist the President in administering the government. - Analyze business processes and translate requirements into technical solutions. - Design and develop database schemas based on system requirements. - Develop and document REST APIs for system features and integrations. - Design and develop user interfaces for the SIPSPSE monitoring application. - Integrate frontend and backend components to support system functionality. - Implement authentication and role based access control. - Collaborate with the team to improve system functionality and ensure requirements are properly implemented.	Sep 2026 - Present

Education

Politeknik Negeri Bandung  - Bandung <i>Associate of Computer Engineering</i>	Aug 2023 - Aug 2026
MAN 1 Subang  - Subang <i>Senior High School, Science Major</i>	Jul 2020 - May 2023

Organisational Experiences

Komisi Pemilihan Umum Himpunan Mahasiswa Komputer - Bandung <i>Business Funds Division</i> - Maintained accurate financial ledgers to systematically track and record all incoming and outgoing funds. - Spearheaded brainstorming sessions to identify and evaluate profitable fundraising opportunities. - Executed and managed daily business initiatives to generate revenue and achieve funding targets.	Sep 2023 - Dec 2023
Forum Komunikasi Mahasiswa Subang Polban <i>Vice Chairman</i> - Initiating outreach programs at schools in Subang to introduce the world of higher education and POLBAN. - Facilitating and managing activities for POLBAN students hailing from Subang.	Dec 2024 - Feb 2026
Departemen Luar Himpunan - Himpunan Mahasiswa Komputer POLBAN <i>Head of the Social and Community Division</i> - Participate in community social activities and organizational committees. - Engage in external activities such as alumni sharing sessions and comparative study visits.	Apr 2024 - Jan 2026

Skills, Achievements & Other Experiences

- Congklak Glory**  (2023): Congklak Glory is a C-based CLI (Command-Line Interface) desktop game that utilizes a Circular Doubly Linked List to dynamically simulate traditional Congklak board mechanics, including continuous seed distribution, move validation, and win-condition tracking.
- Project 2 : Library Based Application Development**  (2024): A digital information security system developed in C++ that

combines AES cryptography and LSB steganography. The application enables users to securely encrypt text, embed hidden messages within image files, and utilizes a Circular Doubly Linked List to optimize data manipulation.

- **Project 3 : Web Based Software Development** 🟢 (2024): SPIP Polban is a web-based internal control system designed to support government compliance and performance evaluation. Developed using Laravel and PostgreSQL, the platform transforms complex assessment metrics into accessible, data-driven visualizations through dynamic charts and tables.
- **Project 4 : Mobile Based Software Development** 🟢 (2025): Schedo is a Kotlin-based mobile application designed for task management and scheduling. It features task creation, schedule tracking, file attachments, and automated notifications to enhance personal productivity.
- **Face Recognition Appliaction** 🟢 (2025): A web-based face recognition application built with Python and Streamlit that utilizes CNNs and ensemble learning to perform real-time face detection, age estimation, ethnicity classification, and similarity matching.
- **PoseLight Project** 🟢 (2025): This project was inspired by the need to create an interactive interface that integrates computer vision with physical hardware. The main references include the official MediaPipe documentation for pose detection, Streamlit tutorials for real-time web applications, and Arduino guides for serial communication. We also utilized open-source code examples from GitHub repositories related to pose detection and LED control, which were adapted to meet the specific needs of this project.
- **Mini Project School Management System** 🟢 (2025): A .NET 8 backend mini-project for a School Management System that implements strict Role-Based Access Control (Admin, Teacher, Student) using JWT authentication, utilizing PostgreSQL and Entity Framework Core for secure and isolated data management.
- **International Roamer Project** 🟢 (2025): Developed as a collaborative solution between Telkomsel and PT Neural Technologies Indonesia, International Roamer is an enterprise web platform for monitoring global network performance. The system features two main interactive dashboards Inbound and Outbound that process large-scale telecommunications data to visualize Key Performance Indicators (KPI) and Key Quality Indicators (KQI), enabling rapid fault detection and optimal service quality assurance
- **Fix Broad Brand Project** (2025): The Fixed Broadband (FBB) Executive Dashboard is a comprehensive monitoring platform developed by PT Neural Technologies Indonesia for Telkomsel to track nationwide network infrastructure deployment, featuring real-time visualizations of regional progress, LOP funneling, and design lifecycle analytics.
- **Basketball Player Position Recommendation Application Using the AHP Method** 🟢 (2026): A web-based basketball player position recommendation system developed as a dedicated solution for Shield Basketball Club. Built with a React JS frontend and a Laravel REST API backed by PostgreSQL, the platform processes data-driven player performance metrics. By implementing a pure Analytical Hierarchy Process (AHP) algorithm, the system evaluates multiple criteria to generate objective, highly accurate player position recommendations, aiding coaching staff in strategic decision-making.
- **Mini Microservice Application** 🟢 (2026): A backend application based on microservices architecture, utilizing Spring Boot and PostgreSQL, simulates an e-commerce transaction flow in a distributed manner. The project separates system responsibilities into two independent services: the Catalog Service (product inventory management) and the Order Service (customer transaction processing).
- **Split Bill Application** 🟢 (2026): A backend RESTful API application built with Spring Boot and PostgreSQL/H2 to manage and calculate group expense sharing (Split Bill). The project separates system responsibilities into three key modules: Bill Group (group management), Expense (expense tracking), and Settlement, which automates and optimizes debt transactions among participants to minimize the number of transfers using a Greedy Algorithm approach.
- **F1 Race Data** 🟢 (2026): F1 Race Data is an automated data engineering pipeline that collects, cleans, and structures historical and modern Formula 1 datasets into a centralized PostgreSQL database. Using Python, the pipeline retrieves raw data from Kaggle, transforms it into relational tables, and automates data validation and ingestion to provide a reliable foundation for analytics and backend services.
- **Formula 1 Race API** 🟢 (2026): Formula 1 REST API is a backend service built with FastAPI and Python that provides Formula 1 data and performance analytics through REST endpoints. Using a modular architecture and PostgreSQL, the API delivers championship standings, race schedules, pit stop data, and driver performance analytics, with Swagger documentation and Postman testing for seamless frontend integration.
- **Tifosi Application** 🟢 (2026): Tifosi F1 Application is a responsive web dashboard built with HTML, CSS, and JavaScript for interactive Formula 1 race tracking and data visualization. It integrates with the backend API to display race status, timezone conversion, lap-by-lap charts, and historical driver, constructor, and session data spanning over 70 years of Grand Prix history.
- **Employability Skills Wadhwani Certification** 🟢
- **Foundational C# Microsoft Certification** 🟢
- **Hard Skills:** Backend Development, Object Oriented Programming, Problem Solving, Database Management , Teamwork
- **Back-End Java Spring Boot Certification** 🟢 (2026)
- **TOEIC Certification** 🟢 (2026)
- **Programming Language Experience:** C#, C/C++, Java, PHP, Python, SQL, HTML/CSS, Kotlin
- **Controlled Devices :** Version Control (Git & GitHub), Visual Studio Code, Postman, MySQL / PostgreSQL, Linux Server (Basic Deployment)
